Q1 / Write an algorithm to check if a give number is prime or not

```
① Start
② print (Enter a number )
③ input n
④ if (n < 2)
      print "(Not prime)"
      end if
   if (n == 2)
      print "prime"
      end if

   if (n % 2 == 0)
      print "Not prime"
   end if
⑤ for( int i = 3 to < n  i+i+2)
      if( n % i == 0)
        Print "Not prime"
      end if
   end for
⑥ End
```

Q2 / Write psedocode for checking if a year is a leap year /

```
① Start
② print "Enter the year"
③ input year
③ if ((year % 4 == 0 and year % 100 != 0) oR (year % 400 == 0)
     print "leap year"
   end if
   else
      print "Not Leap year"
   end else
④ End
```

Q3 / Write pseudocode for A loop that prints the multiplication of a given number /

```
① start
② print "Enter a number"
③ input n
④ set multiplier to 1
⑤ while multiplier <= 10
     print "result = " n * multiplier
     multiplier = multiplier + 1
   End while
⑥ End
```
